Assignment 6

1.Download the latest Ubuntu Desktop ISO image and create a bootable USB drive using Rufus or Balena Etcher.

Ans-

Step 1: Download Ubuntu ISO

1. Open your Windows laptop/PC.
2. Open a browser.
3. Go to the official Ubuntu website: Ubuntu Desktop
4. Download the Ubuntu Desktop ISO.
5. Wait until the ISO download is completed.

Expected file:
ubuntu-xx.xx-desktop-amd64.iso

Step 2: Connect USB

1. Insert a USB pendrive.
2. Backup important data first, because creating a bootable USB normally erases the USB.

Step 3: Download Rufus

1. Open Rufus
2. Download and open Rufus.

Step 4: Create bootable USB

In Rufus:

1. Device: Select your USB drive.
2. Boot selection: Select the downloaded Ubuntu ISO.
3. Partition scheme: Usually GPT for modern UEFI systems.
4. Target system: UEFI.
5. Click START.
6. If asked about ISO mode, select ISO Image mode.
7. Confirm that you want to erase the USB.
8. Wait until the READY status appears.

2.Install Ubuntu Desktop on a virtual machine using VirtualBox or VMware Player, and take a screenshot of the desktop after successful installation.

Ans-

Step 1: Open VMware

1. Open VMware.
2. Click Create a New Virtual Machine.

Step 2: Select Ubuntu ISO

Choose:

Installer disc image file (ISO)

Then browse and select your downloaded Ubuntu ISO.

Click Next.

Step 3: Create Ubuntu VM

Set:

- VM Name: Ubuntu Desktop
- Username: cyberstudent
- Password: Your strong password
- Location: Choose a location with sufficient disk space.

Click Next.

Step 4: Virtual disk

Recommended for a basic lab:

- Disk size: 30 GB or more
- Select Store virtual disk as a single file or split files.

Click Next.

Step 5: Hardware settings

Before starting the VM, select Customize Hardware.

Hardware	**Recommended**
RAM	4 GB
CPU	2 cores
Hard Disk	30 GB+
Network	NAT

CD/DVD	Ubuntu ISO

Step 6: Start installation

1. Start the Ubuntu VM.
2. Ubuntu installer will open.
3. Select your language.
4. Select Install Ubuntu.

Step 7: Keyboard

Select your keyboard layout.

For most systems:

English (US)

Click Continue.

Step 8: Installation type

For a new VM, select:

Erase disk and install Ubuntu

⚠️ This is safe for the new VM's virtual disk. Make sure you are installing inside the VM, not accidentally modifying your real computer's disk.

Click Install Now.

Step 9: Confirm changes

Click Continue when Ubuntu asks to write changes to the disk.

Step 10: Time zone

Select your location/time zone.

For India, select:

India / Kolkata

3.During installation, set up a user account named 'cyberstudent' with a strong password (at least 8 characters, mix of letters, numbers, and symbols).

Ans-

Step 1: Start Ubuntu Installation

After starting your Ubuntu VM in VMware:

1. Ubuntu installation screen will appear.
2. Select Install Ubuntu.
3. Select your Language.

4. Click Next / Continue.

Step 2: Select Keyboard Layout

1. Select:
    - English (US) — commonly used
2. Click Next / Continue.

Step 3: Select Installation Type

When you reach the installation/storage screen:

1. For a new virtual machine, select Erase disk and install Ubuntu.
2. This erases the VM's virtual disk, not your normal Windows disk, provided you are installing inside the VM.
3. Click Install / Continue.
4. Confirm the disk changes if Ubuntu asks.

Step 4: Select Time Zone

1. Select your location.
2. For India, choose India / Kolkata.
3. Click Next / Continue.

Step 5: Create the User Account

You will now get a screen called something like:

Create your account / Who are you?

You will see fields such as:

- Your name
- Your computer's name
- Pick a username
- Password
- Confirm password

Fill them like this:

Your name

Cyber Student

Computer name

ubuntu-cyber

Username

Very important: Enter exactly:

cyberstudent

The username should be lowercase.

Password

Create a password with at least:

- 8 characters
- Uppercase letter
- Lowercase letter
- Number
- Symbol

For example, you can use a pattern like:

Cyber@2026!

This is only an example. For a real account, create your own unique password.

Confirm password

Enter the same password again.

Step 6: Select Login Option

You may see:

Require my password to log in

Select this option.

Do not select automatic login if your practical specifically requires a password-protected account.

Your screen should approximately contain:

Field	Example
Your name	Cyber Student
Computer name	ubuntu-cyber

Field	Example
Username	cyberstudent
Password	Your strong password
Confirm password	Same password
Login	Require password

Step 7: Continue Installation

1. Carefully check the username.
2. Make sure it says:

cyberstudent

3. Make sure both password fields match.
4. Click Next / Continue.

Ubuntu will now start installing.

Step 8: Wait for Installation

The installer will copy files and configure Ubuntu.

Wait until the installation reaches completion.

Then Ubuntu will ask you to restart.

Click:

Restart Now

Step 9: Log in with cyberstudent

After restarting:

1. Ubuntu login screen will appear.
2. Select:

cyberstudent

3. Enter the password you created.
4. Press Enter.

Ubuntu Desktop should open.

Step 10: Verify the Username

Open Terminal:

Ctrl + Alt + T

Run:

whoami

Expected output:

cyberstudent

4.After installing Ubuntu, open the terminal and run the command 'uname -a' to display OS details. Save the output to a text file named os-info.txt.

Ans-

Step 1: Open Terminal

Press:

Ctrl + Alt + T

The Terminal will open.

Step 2: Run uname -a

Type:

uname -a

Press Enter.

You will see output similar to:

Linux ubuntu-cyber 6.x.x-generic #... SMP ... x86_64 GNU/Linux

Your exact output will be different depending on your Ubuntu version/kernel.

Step 3: Save output to os-info.txt

Run:

uname -a > os-info.txt

This saves the command output into a file named:

os-info.txt

Step 4: Check the file

Run:

cat os-info.txt

You should see the uname -a output.

Step 5: Check that the file exists

Run:

ls -l os-info.txt
