Assignment 8

1.Open the Windows Defender Security Center on your laptop or desktop and take a screenshot showing the status of Virus & Threat Protection, Firewall & Network Protection, and App & Browser Control.

Ans-

2.Create a new user account on your Windows system and set a strong password that meets at least 3 out of 4 complexity requirements (uppercase, lowercase, number, special character).

Ans-

Step 1: Press: Windows + I

to open Settings.

Step 2: Go to:mAccounts → Other users

On some Windows versions: Accounts → Family & other users

Step 3: Click: Add account

Step 4: When Microsoft account login appears, select:

Step 5: Select: Add a user without a Microsoft account

Step 6: Enter a username:

cyberstudent

Step 7: Enter a strong password:

Cyber@2026

Step 8: Enter the same password again.

Step 9: Add security questions if Windows asks for them.

Step 10: Click Next.

**3.Disable file sharing for the Public folder in Windows and verify that it is no longer accessible from another device on the same network.

Hint: Use the 'Advanced sharing settings' in the Network and Sharing Center.**

Ans-Step 1: Press Windows + R.

Step 2: Type:

control

Press Enter.

Step 3: Go to:

Network and Internet → Network and Sharing Center

Step 4: Click:

Change advanced sharing settings

Step 5: Expand All Networks.

Step 6: Find:

Public folder sharing

Select:

Turn off public folder sharing

Step 7: Click:

Save changes

Step 8: Press Windows + R.

Step 9: Enter the IP address of your main computer: \\192.168.1.10

**4.Configure the Windows Firewall to block all incoming connections for a specific app of your choice (for example, Spotify or Chrome) and test that the app cannot access the internet.

Hint: Go to Windows Defender Firewall > Allow an app or feature through Windows Defender Firewall, and adjust the settings.**

Ans-

The assignment says to block all incoming connections for an app and then test that the app cannot access the internet.

These are actually two different firewall directions:

- Inbound = Internet/network → your computer/app
- Outbound = your computer/app → Internet

So, blocking inbound connections does not normally stop an app from accessing the internet. To make the app unable to access the internet, you need an outbound firewall rule.
